

NAUTIC

Decorative trellis

MADE IN SPAIN · UV RESIST · 100% Recyclable · PP

Now you can install your fencing in a personalized way with this new concept of square decorative trellis. Do you dare to play with colors and shapes and create a customized fence in your garden?

Benefits

Now you can install your fencing in a personalized way with this new concept of square decorative trellis. Do you dare to play with colors and shapes and create a customized fence in your garden? By incorporating a new design, in random formats and positions, the Nautic panel protects you from prying eyes, the wind, the sun... creating original light effects thanks to its irregular and rounded shapes. The 1x1m dimensions allow different types of installation: by changing its orientation we can customize the fencing to our liking. It can be installed vertically (one above the other) or horizontally to close your terrace, put on a wall or create a private space in your garden. Installed on the wall, this trellis can also be used as a support for climbing plants or as a decoration. The injected polypropylene resin allows to have a light, robust and durable product for years. Together with the accessories in this range, it is possible to create enclosures in a simple way and without the need for tools. Take a look at the accessories needed to fix it perfectly: PERFIX (square), BASFIX (base), ALUPOST (post) and profile H.

Characteristics

-Made of injected PP resin. -Weight: 3.34 kgs. -Thickness: 5mm -Available in different colors: white and rust or anthracite color with metallic effects. -It can be easily cut in any direction. -With anti UV treatment. The decorative trellis can undergo a slight expansion or contraction with changes in temperature, so it is important to follow the assembly instructions (see video) to maintain the correct distances.
